

Croft Filters supply Tee Strainers, commonly used in a number of industry sectors. These filters can be manufactured from 1" to 24" in either 304 or 316 Stainless Steel and other materials.

The baskets can be made from 500 micron up with flanged fittings to suit.

Tee strainers are typically used where space is limited and a strainer is needed for protection of pumps, valves and similar equipment.

Tee strainers normally have either a bolted cover or a quick opening cover for to suit the application.

We can basically custom make a Tee Strainer to suit many applications please call for more information.
