

Croft manufacture many types of Inline Filter and they are a very popular filter and have a widespread useage in applications within industrial sectors such as Food, Oil & Gas, Power Generation, Chemical and Marine amongst many others.

Our inline filters can be manufactured to various type of connections whether the filter is sat within a pipe or where a seperate filter housing is to be introduced inline. This can be either a flanged fitment or BSP, NPT or Hygenic to suit your connectivity.

Naturally the filter element will be made to the desired filtration level you require and providing the correct information is given the filter will achieve your desired flow rate. Inline filters can be manufactured using different materials - this is to suit special circumstances be it temperature, corrosive media or the need to be hygenic.

Because we are a bespoke filter manufacturer we can make the inline filter to fit within the space youve allocated on your application. Croft have a very good turnaround time for the filters they manufacture with an average delivery of 3-5 days from placement of order.
