

Product Guide

Filter Elements

The filter elements we supply can be used alongside existing filter housings and vessels.

In many cases, filter housings are sold with elements which are not designs specifically for the process and not fit for purpose. We specialise in designing and manufacturing filter elements to not only fit within your existing housings, but to also help enhance the filtration.

Elements are available in a variety of materials and can be manufactured from Wire Mesh, Perforated Plate and Knitted Wire. Available in a short lead time we can work from a basic sketch, a sample or detailed CAD drawings.
