

Product Guide

Tee Strainers

Tee Strainers can be applied to a system or equipment for protection and where space is limited.

Each filter can be manufactured from 1" to 24" in materials such as 304 and 316 Stainless Steel amongst others.

The strainer normally has either a bolted cover or a quick opening cover depending on the application. Croft can also offer baskets, or filter medium, with the opening area from 500 micron up and flanged fittings to suit the system or equipment.
