

Product Guide

Witches Hat Filters

Witches Hat Filters can be used for softening, desalination, filtration and as pre-treatment process in a system.

Witches Hats can be manufactured to filter from as little as 1 micron. Also known as: conical filters, last chance filters and cone filters, the witches hat design can be manufactured from both perforated plate and wire mesh.

The custom perforated plate offers a support for the mesh, reducing the chances of the mesh from splitting under higher pressures.
