

Product Guide

Nozzle Filters

The Nozzle Filters we supply can be used for a variety of processes.

Used to encase the ends of nozzles, Nozzle Filters have a multitude of applications dependant on the use case of the nozzle itself. This can range from spraying/atomising/forming media to stopping particulates of certain sizes and above from entering the nozzle, and therefore stopping clogging and the potential damage to the nozzle that would follow.

Our Nozzle Filters are available in a variety of materials, and can be manufactured from Wire Mesh, Perforated Plate and Wedge Wire.
